

JIWE .io

PARTNER LOGO GUIDE

Discover. Play. Publish. Support.

Edition 01 — 2026 • brand@jiwe.io

For anyone showing jiwe.io outside of jiwe.io.

This guide covers one thing: the jiwe.io logo, and how to place it correctly on a partner site, a press page, a sponsor wall, a festival programme or a co-branded release. Everything here is approved for use without further sign-off, provided the mark is reproduced from the supplied files and unmodified.

PRIMARY LOCKUP

Gem, wordmark, suffix. Use this wherever there is room to read it.

ICON ONLY

For favicons, app tiles, avatars and anything under 32px tall.

Write it lowercase

In running text the platform is **jiwe.io** — lowercase, always with the domain. The logo is the only place it is set in caps.

Not Jiwe Studios

jiwe.io is the platform. Jiwe Studios makes the games. If the credit is for a specific title, ask which entity belongs on it.

Three approved versions

Pick by background, not by preference. If your surface is a deep blue or the mark needs to lead, use Native. If your surface is dark, use Dark Mode. If it is white, bone or a light photograph, use Light Mode.

Native

PREFERRED

The platform's own colour. Deep Blue field, bone wordmark, pale blue suffix. Use it when jiwe.io is the subject rather than one logo among many.

Field
#16394A

Mark
#F7F3EF

Suffix
#8FBBCE

Dark mode

For charcoal, black and dark photographic surfaces. The mark reproduces in bone with the blue suffix retained — this is what keeps it recognisably jiwe.io on a neutral dark page.

Mark **#F7F3EF** Suffix **#8FBBCE**

Light mode

For white, bone and light surfaces — press pages, sponsor rows, print programmes. Charcoal mark, Deep Blue suffix at full strength.

Mark **#201C1B** Suffix **#16394A**

Deep Blue #16394A

Midnight #0E2733

Sky #8FBBCE

Charcoal #201C1B

Bone #F7F3EF

Give it room

Clear space on all four sides equals the height of the gem (X). No text, rule, image edge or other logo enters that zone.

32px — minimum on screen

0.5in — minimum in print

Too small

Use the icon instead

In a sponsor row

Match optical weight, not pixel height. Because the lockup is wide, size it so the wordmark reads at the same scale as neighbouring logos.

On photography

Place it over a quiet, even area. If the image is busy, sit the Native lockup on a solid Deep Blue block rather than dropping a shadow behind it.

Six things that break it

Don't stretch,
squash or rotate.

Don't recolour it. Three
versions exist; there is no
fourth.

Don't place a
version on a
background it can't
hold contrast
against.

Don't reset the
wordmark in
another typeface,
or in mixed case.

Don't add words, taglines or
another entity's name to the
lockup.

Don't crop the gem
or let a container
cut its facets.

If in doubt

Send the layout to brand@jiwe.io before it goes to print or publication. A ten-minute check is cheaper than a reprint, and we would rather say yes to something unusual than find out afterwards.

What you receive

Each of the three versions ships as SVG for screen and layout, and PNG at 3× for anywhere SVG is not accepted. Use SVG wherever the tool allows it — the gem's facets soften badly when a raster is scaled up.

FILE	USE	FORMAT
jiweio-lockup-native	Deep Blue field	SVG · PNG
jiweio-lockup-dark	Dark surfaces	SVG · PNG
jiweio-lockup-light	Light surfaces	SVG · PNG
jiweio-icon-dark · -light	Under 32px	SVG · PNG
jiweio-avatar-native	Social profile	PNG 1024 ²

Linking

Point the mark at **<https://jiwe.io>**. If you are crediting a specific project, link the project page rather than adding its name to the logo.

Boilerplate

jiwe.io is the platform where players discover and support African games, and where creators publish and fund them.

JIWE .io
